Third party studies show very significant improvement in each of the areas addressed in this paper:

- Drilling and service rig (floor) safety solutions
- Drilling rig (substructure) safety solutions
- Well site safety solutions
- Proactive environmental impact solutions
- Tangible and intangible benefits
- Rig operations - maximize on savings
- Well site - maximize on savings

The benefits are not isolated to climate or site specific applications. The solutions address the vast diversification of drilling, service, workover rigs (on/off shore) as well as the wellhead itself.
